Cibitung, Bekasi, West Java, Indonesia

Results- driven Software Engineer specializing in backend development (NestJS, Go) and applied Artificial Intelligence (Python). Demonstrated success in deploying scalable microservices, engineering AI-driven data pipelines, and leading technical teams to deliver optimized, high-availability web and mobile solutions.

Work Experiences

POP TB Indonesia - South Jakarta
IT & CLM Staff

Jun 2026 - Present

- Directed Quality Assurance (QA) protocols and conceptualized future feature architectures for [laportbc.id](#), successfully mitigating 5 critical bugs and ensuring 99.9% system uptime for seamless public complaint reporting.
- Engineered interactive data visualization dashboards (Google Looker Studio/Power BI) by processing, cleaning, and integrating over 500+ sensitive patient data entries, delivering actionable advocacy insights for key stakeholders (MoH, Donors).

Daylight - Remote
Technical Project Manager & AI Engineer (Project-Based)

Jun 2026 - Present

- Translated business and functional requirements into a comprehensive Software Requirements Specification (SRS), defining system workflows, technical requirements, and application architecture for a DNA testing platform.
- Designed the system architecture for a SvelteKit web application and containerized Go backend, ensuring clear separation of application responsibilities and scalable service integration.
- Led a cross-functional engineering team of 5 through Agile/Scrum practices, including backlog planning, weekly sprint meetings, task delegation, and delivery tracking.
- Designed PostgreSQL database schemas for multi-test cart orders and bulk Kit Code inventory, including data relationships and role-based access control requirements.
- Designed an asynchronous AI processing workflow using RabbitMQ and integrated Google Gemini LLM through an adapter-based architecture.
- Collaborated across technical and project functions to align implementation with functional requirements and delivery objectives.

Daylight - Remote
Backend Engineer (Project-Based)

Feb 2026 - Jun 2026

- Spearheaded the backend architecture migration for the "Foldin" web from a NestJS monolith to highly scalable Go (Echo) microservices, enhancing system performance and modularity.
- Deployed robust event registration and waitlist modules utilizing Prisma and Docker, accelerating deployment cycles by ~30% and ensuring high availability for 500+ anticipated users.

Self-Employed (via projects.co.id) - Remote
Web Developer (Freelance)

Feb 2025 - Feb 2026

- Engineered a high-performance backend API for Tokudigital.com using NestJS, securely orchestrating complex payment data logic and successfully integrating third-party payment gateways (Xendit) to handle various payment methods.
- Architected a secure mobile backend using NestJS and Supabase, implementing a strict 3-tier Role-Based Access Control (RBAC) and integrating Firebase Cloud Messaging (FCM) to enable reliable, real-time administrative push notifications.
- Built a scalable backend for a Blood Sugar Monitoring application utilizing NestJS and Drizzle ORM, designing optimized database queries to ensure efficient and secure health data management.
- Streamlined academic workflows by building an Administration System ('SILAT') using PHP, effectively digitizing manual administrative processes, automating data collection, and improving overall data accessibility.

POP TB Indonesia (Bakrie Center Foundation) - South Jakarta
IT Development Intern

Sep 2024 - Jan 2025

- Delivered comprehensive weekly bug- tracking reports, demonstrating proficiency in ticketing system workflows, technical documentation, and user-oriented problem solving.

B - Universe - Tangerang
Web Developer Intern

Jul 2024 - Aug 2024

- Engineered an automated data retrieval system and AI-powered chatbot, streamlining complex search capabilities and significantly reducing manual administrative workloads.

Education Level

- Final Thesis ("Sapa"): Developed a Telegram-based multi-agent counseling chatbot utilizing Retrieval-Augmented Generation (RAG) architecture, rigorously evaluated with BERTScore to achieve an exceptional 85 average performance score.
- Analisaham AI Project: Architected an automated data pipeline utilizing Python and Groq LLM to continuously scrape, process, and analyze 100+ daily financial articles, demonstrating a strong grasp of data processing automation and analytics.
- Real-Time Backend Project: Engineered a scalable chat architecture using the MERN stack and Socket.io, enabling seamless, instant user communication with sub-second message latency.
- Academic Leadership: Led the Informatics Class of 2022 as Chairman, orchestrating academic initiatives and mobilizing over 100+ students for various university events.

Organisational Experience

- Led and managed a cross-functional team of 55 volunteers, strategically delegating tasks to execute a large-scale national seminar and UI/UX competition.
- Surpassed the seminar participant acquisition target by over 10% through effective outreach and event promotion.
- Drove a 15-25% increase in social media followers by directing the creation and distribution of high-value, informative content.

Skills, Achievements & Other Experience

- System Analysis & SDLC:** Requirements Analysis, Technical Specification, SRS, System Architecture, Agile/Scrum, API Documentation, QA & Testing, Bug Tracking
- Programming & Frameworks:** Go (Echo), Python, TypeScript, PHP, NestJS, Laravel, MERN Stack (ReactJS, Node.js).
- AI & Data Engineering:** Retrieval-Augmented Generation (RAG), Prompt Engineering (Groq LLM), Flowise AI, Data Pipeline, Sentiment Analysis.
- Database & Infrastructure:** PostgreSQL, MySQL, Prisma, Drizzle ORM, Docker, RESTful APIs, Supabase, Firebase.
- Tools & Methodologies:** OOP, Data Structures, Algorithms, Git, Manual Testing, QA Bug-Tracking.
- Certifications & Awards:** Best Graduate Machine Learning Engineer (Dicoding & DBS Foundation, 2024), National Finalist PINGFEST (2023).
